Academics and practitioners argue that intangible values have become significant value drivers of today's economy. Major production inputs no longer comprise of property, plant and equipment, but rather of brands, knowledge and other technological innovation. Based on this notion, information on such phenomena is supposedly crucial for existing and potential capital providers in making decisions whether to allocate resources to a company. This thesis examines the information use and needs of financial analysts with respect to intangible values. The purpose is to shed light on the usefulness of such information from the perspective of one of the primary user groups of IFRSs.

The Proceeding book presented the International Conference on Financial Forensics and Fraud, which is an international conference hosted by Universitas Hindu Indonesia in collaboration with Australasian Accounting, Business and Finance Journal. CD version of the proceedings of the 8th European Conference on Management Leadership and Governance - ECMLG 2012 hosted by the Neapolis University on the 8-9 November 2012. 567 pages

Despite noticeable growth in Islamic banking and finance literature in recent years, very few published books in this area deal with supervisory and regulatory issues in Islamic banking – theoretically or empirically – and none with the critical issue of risks involved in liquidity management of Islamic banks. This unique book is the first of its kind in dealing with challenges these financial institutions face in the absence of interest rate mechanism and debt-based financial instruments. The book examines critically issues involve in managing the risk of liquidity management for these types of institutions, including those stemming from Basel requirements. It then offers an alternative regulatory framework more appropriately suited for such banks without compromising safety and security. The book's unique features and innovative dimensions diagnostically differentiate between Islamic banks and conventional banks as related to liquidity management risks. It proposes a risk-sharing regulatory framework that, once implemented, would mitigate risks posed by balance-sheet mismatches. The book aims to assist regulators, supervisors, Islamic finance practitioners, academicians and other relevant stakeholders.

Financial accounting theory has numerous practical applications and policy implications, for instance, international accounting standard setters are increasingly relying on theoretical accounting concepts in the creation of new standards; and corporate regulators are increasingly turning to various conceptual frameworks of accounting to guide regulation and the interpretation of accounting practices. The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally and corporate financial reporting in particular. For instance, the fundamentals of capital market theory (i.e. market efficiency) and measurement theory (i.e. fair value) have received widespread public and regulatory attention. This comprehensive, authoritative volume provides a prestige reference work which offers students, academics, regulators and practitioners a valuable resource containing the current scholarship and practice in the established field of financial accounting theory.

A follow-up publication to the Handbook of Medieval Studies, this new reference work turns to a different focus: medieval culture. Medieval research has grown tremendously in depth and breadth over the last decades. Particularly our understanding of medieval culture, of the basic living conditions, and the specific value system prevalent at that time has considerably expanded, to a point where we are in danger of no longer seeing the proverbial forest for the trees. The present, innovative handbook offers compact articles on essential topics, ideals, specific knowledge, and concepts defining the medieval world as comprehensively as possible. The topics covered in this new handbook pertain to issues such as love and marriage, belief in God, hell, and the devil, education, lordship and servitude, Christianity versus Judaism and Islam, health, medicine, the rural world, the rise of the urban class, travel, roads and bridges, entertainment, games, and sport activities, numbers, measuring, the education system, the papacy, saints, the senses, death, and money.

Chinese Research Perspectives on Educational Development, Volume 3 informs the Western readers of the current educational development in policy, practice, and research in China.

Financial globalization paired with the relaxation of constraints on capital flows between countries before the 2008 crisis, increased merger activities among the World's largest stock exchanges. The financial crisis of 2008 had a severe impact on the development of equity markets, corporate financial stability, and corporate governance, and a multi-step approach is needed to fully appreciate the causes and effects of this event. This book engages the separate strands of literature to advance a more holistic understanding of whether and how the national institutional environments in selected countries around the world has been changed after the crisis. Institutions and Accounting Practices after the Financial Crisis: International Perspective sets out a framework for the analysis of institutional environments and accounting practices in in selected countries around the world during the pre-crisis period, followed by an examination of the impact of the crisis. It scrutinizes the changing roles of debt and equity markets; the shift in accounting practices and capital financing choices due to the economic downturn; and the lessons that can be obtained from the financial crisis, while considering the institutional architecture of international business environments. This ongoing process of integration and globalization increases interdependence between world markets, and allows shocks to propagate across national and continental lines, making the understanding of international markets vitally important to American investors. Aimed at primarily researchers, academics and students in the fields of international accounting, management and finance, Institutions and Accounting Practices after the Financial Crisis: International Perspective will additionally be of value to practitioners and policy makers, supplying them with information regarding the changes in accounting practices and risk evaluation due to the crisis.

This book explores accounting for biological assets under IAS 41 – Agriculture, and explains the recent adjustments introduced by the IASB which allow firms to choose between cost or revaluation models concerning mature bearer plants. Identifying the firm and country-level drivers that inform the disclosure and measurement practices of biological assets, this concise guide examines the value relevance of measuring those assets at fair value. It also analyses how firm and country-level drivers explain the differences in the disclosure level and practices used to measure biological assets under IAS 41. Finally, it evaluates whether there is a difference in the relevance of biological assets among the listed firms with high and low disclosure levels on biological assets. Based on a major international study of a wide selection of firms and country-level drivers, this book is vital for standard setters, stakeholders, students, accountants and auditors who need to understand disclosure and measurement practices of biological assets under IAS 41.
